                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    seq_documentation_block:
                                                                        This invention describes novel polypeptides and their encoding nucleic acids derived from human pancreatic tumor tissue which have cytostatic activity. The sequences are also useful in producing pharmaceutical compositions for treatment of pancreatic tumors. AAZ52858-Z53014 represent expressed sequence tag (EST) fragments derived from a human pancreatic tumor cDNA library and which encode the proteins represented in AAY73814-Y74252.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New human nucleic acid sequences from proteins -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 1999-621386/54

Exemplary conditions or disorders to be treated with such antibodies and other compounds include benign or malignant tumours (e.g., renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulva, thyroid, hepatic carcinomas, sarcomas, glioblastomas, and various head and neck tumours), leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastocoelic disorders, and inflammatory, angiogenic and immunologic disorders. AAC58242 to AAC58366 represent PCR primers and hybridisation probes used in the isolation of the human PRO sequences. AAC58367 to AAC58396 and AAB24057 to AAB24089 represent human PRO polynucleotide and protein sequences given in the exemplification of the human protein report invention.

The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated P, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB7789 represent sequences used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                       N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present SEQ ID NO:1027 to 1052, 7921 and 7922.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes novel nucleic acid (cDNA) sequences (A) which have anticancer activity and are highly expressed in ovarian tumor tissue (and some also in testis and breast cancer tissue). The products of the invention can be used for gene therapy. (A) are used (i) for recombinant expression of polypeptides (B) and (ii) to isolate complete genes. (B) are used (i) to identify agents suitable for treatment of ovarian cancer; (ii) directly for treating this form of cancer (including expression from gene therapy vectors) and (iii) for generation of specific antibodies. (A) are identified by assembling ESTs (expressed sequence tags) from a particular tissue type before comparison of expression patterns. This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTs from different libraries may represent different course of the same unknown gene, distorting the estimated frequency of occurrence in a particular tissue. AAZ77450-Z77572 represent the human of the invention and larged the protein fragments described in the method of the invention and accord to be present to be revealed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ratio: 1.000 Percent Similarity: 100.000

This cDNA clone codes for huxAG-1 (see AAM37844), a member of a novel family of human growth factors also including huxAG-2 (see AAM37845) and huxAG-3 (see AAM37845). These proteins share homology with the XAG protein of Xenopus laevis, which is involved in embryogenesis and is expressed in adult tissue. Expression of huXAG-1 has been discovered in colon cancer tissue, with no corresponding expression in healthy colon tissue. The huXAG-1 gene, also designated colon cancer-specific gene (CCSG), provides a molecular marker for

They can also be used to stimulate or promote liver regeneration, e.g. after surgery. They can also be used to prevent and heal damage to the lungs caused by various pathological states. They can be used to stimulate proliferation and differentiation and promote the repair of alveoli and bronchiolar epithelium to prevent, attenuate, or treat acute or chronic lung damage, e.g. emphysema, which results in the progressive loss of alveoli, and inhalation injuries, e.g. resulting from smoke inhalation and burns, that cause necrosis of the bronchiolar epithelium and alveoli. They can also be used to stimulate the proliferation and burns, that cause necrosis of and could therefore be used to promote healing of breast tissue injury due to surgery, trauma or cancer. Antagonists can be used to treat hyperproliferative disorders, including cancer, in

HuxAG polypeptides are growth factors and can be used to stimulate proliferation of cells. They can be used to stimulate the proliferation and differentiation of hepatocytes to alleviate or treat liver diseases and pathologies such as fulminant liver failure caused by cirrhosis, liver damage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        colon cancer. huXAG-1 cDNA was isolated from a cDNA library derived from human colon cancer tissue.                                                                                                                                                   This invention relates to a human growth factor polypeptide huXAG-1 also CC known as a colon cancer specific gene (CCSG). HuXAG-1 stimulates cell CC proliferation as a growth factor. The HuXAG-1 protein is useful for cidentifying compounds capable of enhancing or inhibiting cellular response induced by huXAG-1. The protein is also useful for stimulating CC proliferation of cells e.g. colon, breast, liver and lung cells, and the pathologies such as fulminant liver failure caused by cirrhosis, liver canage caused by viral hepatitis and toxic substances, for preventing and CC damage caused by viral hepatitis and toxic substances, for preventing and CC cancer. HuXAG-1 and the identified antagonist are useful for treating cancer in particular colon cancer. Detecting altered levels of huXAG-1 cancers. The gene encoding huXAG-1 is useful for monitoring human colon cancer in useful for monitoring human colon cancer. HuXAG-1 carcinoma. huXAG-1 is useful for monitoring human colon cancer in huXAG-1 carcinoma. huXAG-1 is useful for monitoring human colon cancer in huXAG-1 carcinoma. huXAG-1 is useful for monitoring human colon cancer in huXAG-1 carcinoma. huXAG-1 nucleic acid molecules are also useful for charges cancer in huXAG-1 carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; growth factor; huXAG-1; colon cancer specific gene; CCSG; cell proliferation; liver disease; fulminant liver failure; cirrhosis; hepatitis; cancer; colon cancer; colorectal carcinoma; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention describes the novel use of a protein found in breast cancer cell membranes (BCMP 7) for diagnosing, preventing and treating breast cancers. The peptide has cytostatic action and potential uses in gene therapy and in vaccines. The polypeptide, antisense nucleic acids, or fusion proteins comprising and Green Fluorescent protein or the DsRed Fluorescent protein, antibodies specific for and/or nucleic acid are used for the prevention and/or treatment of breast cancer. Antibodies against may also be used for screening for and/or diagnosis of breast cancer in a patient. The method for monitoring/assessing breast cancer treatment in a patient and for the identification of metastatic breast cancer cells in samples from a patient. This sequence encodes breast cancer cells associated protein 7 (BCMP 7), located on chromosome 7p21.3, described in the method of the invention.

                                                                                                 alignment_scores:
                                                                                                                                                                          CC extended cDNAs (or genomic DNAs obtainable from them) may be used to CP prepare PCR primers and probes. These are useful for forensic matching or CC propartive identification by DNA sequencing. They may also be used in CC proteins encoded by the extended cDNAs are useful in identification of CC proteins encoded by the extended cDNAs are useful in identification of CC tissue types or cell species, as well as identifying tissue specific CC soluble proteins. The sequences can be used for chromosome mapping and CC identification of genes associated with hereditary diseases or drug CC response. Signal sequences from the cDNAs can be used in construction of Secretion vectors. Other sequences derived from the extended cDNAs can be used to clone upstream genomic DNA sequences including promoters. This is CC used to clone upstream genomic DNA sequences including promoters. This is considered that interact with promoter CC sequences. Some of the proteins may be useful in diagnosing and treating CC several disorders including, but not limited to: cancer, hyperlipidaemia, CC cardiovascular and neurodegenerative disorders, autoimmune diseases, and crheumatic diseases, embryogenic disorders, hypertension, renal injury, cC amino acidurias, hypoglycaemia, male rat infertility and myopathies.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This is the nucleotide sequence of the open reading frame of a novel human protein comprising a secretory signal (AAV29047), isolated from stomach cancer cells. Its proteins can be used as nutritional sources or supplements. The proteins may also have cytokine functions, immune modulating functions, haematopoiesis regulating activity, activiny/inhibin regulating activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity.

                                                                                                                                                                                              The present sequence is one of a large number of 5' ESTs derived from mRNAS encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAS or polyA+ RNAS derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-OT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                451
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1; SEQ ID 113; 71pp + CD-ROM; English

                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequences AAA77722-A78199 represent 478 cDNAs encoding proteins or portions of proteins which are associated with human colon tumours. The invention also specifically discloses 8 human colon tumour proteins (CABB11897-B11904). The nucleic acids, the polypeptides they encode, and antigen presenting cells (APCs, preferably dendritic cells) expressing csuch polypeptides may be used in vaccines that target tumour cells, caspecially colon tumour cells, thereby inhibiting the development of cancer. T-cells specific for the polypeptide expressed by the APC are clused to remove tumour cells from biological samples, especially blood or fractions thereof. The sample or the isolated T-cells specific for the collypeptide can then be used to inhibit cancer development. CD4+ and/or cluster the proliferation, or an APC expressing such a polypeptide or cause the proliferation of specific T-cells. The T-cells can be capainst the polypeptides may be used to the patient to inhibit cancer development. Nucleic acids encoding the polypeptides and antibodies against the polypeptides may be used to determine the expression level concer cells are present. Such diagnostic methods may also be used to cancer cells are prosession of a cancer by repeating the processes at time concerted.

Comparison to the current result to previous results. The present sequence represents a cDNA encoding a human colon tumour
                                                                                                                                                                                                                                                                                          Percent Similarity:

The present invention describes colon tumour associated proteins (I) and the polynucleotides (II) that encode them. (I) have cytostatic activity. (I) and (II) can be used in gene therapy and vaccine production. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate colon tumour associated protein (TCAP) expression, such as colonic cancer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of TCAPs by expressing inactive proteins or to supplement the patients own production of them. Additionally, (II) may be used to produce the TCAP proteins, by inserting the nucleic acids into a host

alignment\_scores: Quality: 133.00 Ratio: 1.000 Percent Similarity: 100.000 alignment\_block: Align seg 1/1 to: AAI28641 from: 1 US-09-674-266A-181 x AAI28641 cell culturing the cell to express the protein. (II) and its complementary sequences may also be used as DNA probes in diagnostic polymerase chain reaction (PCR) and hybridisation assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. (I) may also be used as antigens in the production of antibodies against TCAPs and in assays to identify modulators of TCAP expression and activity. Anti-(I) antibodies and antagonists may also be used to down regulate TCAP expression and activity. The anti-(I) antibodies may also be used as diagnostic agents for detecting the presence of TCAPs in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). Ant28460 to AAM24523 represent nucleotide and amino acid sequences given in the exemplification of the present invention. 361 164 311 148 261 131 211 114 161 111 Sequence 409 BP; 131 A; 104 C; 98 81 HisLeuSerProAspGlyGlnTyrValProArgIleMetPheValAspPr 164 euAlaGluGlnPheValLeuLeuAsnLeuValTyrGluThrThrAspLys 147 sSerGlnAlaLeuLysLysValPheAlaGluAsnLysGluIleGlnLysL i31 TGGCAGAGCAGTTTGTCCTCCTCAATCTGGTTTATGAAACAACTGACAAA 310 CAGTCAAGCTTTAAAGAAAGTGTTTGCTGAAAATAAAGAAATCCAGAAAT 260 Length: 133

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /note-*Organ: Pancreas; Vector: pSPORT1; Site_1: Not 1; Site_2: Sal 1; Starting library constructed using SuperScript Plasmid Library kit (Life Technologies). cDNA made by oligo-dT priming. Size-selected by column fractionation; average insert size 1.08 kb. Library was amplified once on solid support and plasmid DNA from library was prepared. The library DNA was normalized by method #4 from Bonaldo, Lennon, and Soares 1996 Genome Research 6:791-806; 0.5 microgram single-stranded library plasmid DNA was mixed with 5 micrograms PCR product representing library inserts and hybridized to an Ecot of 20. Single-stranded (unhybridized) plasmids were isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ø
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             by hydroxyapatite chromatography and used to make library."
